
Characteristics Of Phylum Chordata Chart Answers

phylum chordata - auburn university - phylum chordata deuterostome, eucoelomate, bilateral symmetry this phylum can be characterized by 4 unique characteristics found uniformly among members of the group, often referred to as the big four. each of these is found in at least some stage of the life cycle of all members: 1. notochord – cartilaginous skeletal rod 2. **topic 16: phylum chordata - auburn university** - b. characteristics 1. head with brain and skull 2. vertebral column – during development in most (all but myxini), surrounding and ultimate replacement of notochord by bony or bone-like, hollow vertebrae; also, encase brain in protective box (skull or cranium) of bone or cartilage ... **topic 16: phylum chordata ... chordates fact sheet - state college area school district** - these characteristics are always found at some embryonic stage, although they may be altered or may disappear altogether in later stages of the life cycle." hickman, c.p. and l.s. roberts. 1994. biology of animals, sixth edition. wm.cown publishers: dubuque, iowa. page 637. major characteristics of phylum chordata **kingdom animalia phylum chordata** - phylum chordata 4 characteristics of a chordate 1. a dorsal hollow nerve cord (spinal cord in vertebrates) 2. a notochord (most vertebrates only have a notochord during development –becomes the backbone in vertebrates) 3. pharyngeal pouches (develop into gills in fish and amphibians and becomes glands and auditory canal in later chordates) 4. **phylum chordata - vertebrata mammals** - animals: phylum chordata-vertebrata; mammals; ziser lecture notes, 2015.11 12 each species of mammal has a typical adult size skeleton doesn't keep growing throughout life as in amphibians and reptiles 4 limbs for locomotion (=tetrapods) pectoral & pelvic appendages most have fore and hind limbs similar limbs are up under the body **phylum chordata - chordates internal skeleton with muscle ...** - phylum chordata - chordates internal skeleton with muscle attachments on outer surface allows for greater range of movement and development of large body size segmented body plan all chordates have (in embryo or adult) notochord dorsal nerve tube post-anal tail pharyngeal gill slits **phylum chordata - integrative biology** - phylum chordata 1. deuterostomes (like the echinoderms) 2. all share four features: • notochord supports body • nervous system develops from dorsal nerve cord • embryos have pharynx with slits • embryos have tail that extends past anus three subphyla two invertebrate subphyla 1. urochordata (tunicates) 2. cephalochordata (lancelets) 3. **phylum chordata: protochordates 1 biological sciences 102 ...** - phylum chordata: protochordates 1 biological sciences 102 - animal biology - notes & vocabulary phylum chordata (l. chorda, cord) $\frac{3}{4}$ the animals most familiar to people – humans belong to this phylum $\frac{3}{4}$ phylum name derived from presence of a notochord = rodlike, semi-rigid connective tissue structure for support of body and muscles and to stiffen the body **phylum: chordata - instruction2sac** - general characteristics - tunicates or sea squirts have tadpole-like larva and adult forms encased in a tough tunic that is formed by secretion and contains cellulose. tunicate larva have all four chordate characteristics, but only the pharyngeal slits are retained in the adult form. **invertebrate phyla characteristics phylum porifera (sponges)** - invertebrate phyla characteristics phylum porifera (sponges) - means "pore bearing" - no true tissues or organs (most primitive of the multicellular animals) - adults are sessile - adults typically asymmetrical - have some regeneration capabilities - flagellated cells (choanocytes) drive water through canals and chambers **introduction to the chordates - paulding.k12** - phylum: chordata. 4 basic characteristics of chordates • (some of these characteristics may not be present entire life cycle of animal!) 1. dorsal, hollow nerve cord = central communication cable ex. spinal cord 2. notochord = long support rod below nerve **phylum chordata - bio.fsu** - subphylum. urochordata. adult. has only 1 chordate characteristic: pharyngeal gill bars have become a filter feeding basket. larva. has all 4 chordate characteristics **phylum chordata from sea otters to sea squirts** - phylum chordata from sea otters to sea squirts • the big four! – pharyngeal slits - a series of openings that connect the inside of the throat to the outside of the "neck". these are often, but not always, used as gills. – dorsal nerve cord - a bundle of nerve fibers which runs down the "back". **vertebrates - houston museum of natural science** - attention to the chordata phylum. what are the characteristics of animals in this phylum? tell students to circle any animals on their list that belong in this phylum. life science teks sixth grade: 6.12c, 6.12e, seventh grade: 7.10a, 7.10b, 7.11b, 7.12a, 7.12b eighth grade: 8.11a, 8.11b, 8.11c vertebrates middle school vocabulary
